

Offices and Schools

Asthma is the number one chronic illness for children. The benefits of filtering the air in schools and offices shows how important clean air can be for your health. In schools that installed Purifans throughout the school the number of sick days dropped by more than 61%. This is partly because the Purifan helps reduce the impact of allergens on people with allergies and asthma. Filtering the air has been shown to reduce the spread of contagious illnesses.

The Purifan Clean Air Wellness Program for offices can help employees feel better at work, reduce the number of missed days due to sickness and lower the amount of health insurance costs the employees use. By lowering use of insurance, companies can slow down rapidly rising health insurance costs.

Over 40,000 Sold!

The Purifan Company was founded in 1998 and has sold more than 40,000 Purifans to both commercial and residential customers, solving serious air quality problems. Distributors get up to 50% of new sales from happy customer referrals when people brag about their Purifans.

The Purifan is a patented air filtration system that mounts to most existing ceiling fan motors replacing the blades. The rotating Purifan draws particle-filled air in the bottom, forces it through hidden, five-stage HEPA filters and blows clean filtered air out the sides in every direction. This creates the ideal whole-room airflow pattern that filters all the air in a 20 x 20 foot area about 40 times per hour. Low-cost filters are replaced every 9 to 12 months in a non-smoking home. The Purifan has a lifetime warranty.

PLEASE HELP ME FIND QUALITY PEOPLE TO JOIN MY MLM BUSINESS OPPORTUNITY?

*EARN EXTRA INCOME FOR YOUR FAMILY
BY SELLING AIR PURIFIERS FULL OR PART TIME*

WHAT IS NETWORK MARKETING?

Network Marketing is selling to people you know, while recruiting your own Downline of Purifan Independent Business Owners or PIBOs. Your recruited PIBOs sell Purifan products and recruit their own Downline. You earn a commission on products you sell and an override commission on three levels of your recruited Downline sales. This substantially increases and stabilizes your monthly income. This program requires NO inventory purchases and has a great commission plan and corporate culture.

A Great Home-Based Business

Breathing Dirty Air is Very Unhealthy

A key to selling is to believe in the product you sell. You should become a strong advocate of the benefits of breathing cleaner air. Purifan is a great product, and customers love the impact it has on their indoor air quality and health. Today, more people than ever are willing to invest in air purification and wellness programs to protect their health and lower their health care costs.

Network Marketing's Multiplying Power

MLM or Network Marketing taps into the power of personal relationships to offer great products that are not available in retail stores to people who know you and trust you. You also persuade people you know to send you referral business from their friends, family or commercial accounts.

The Downline Commission Program means you not only make a commission on what you sell directly, but also on what people recruited into your downline sell. This increases your income based on the size of your downline.

A Great Commission Plan

Sell two Purifans to a neighbor with Asthmatic children and earn \$120. Sell ten to a daycare, nursing home or office and you earn \$600. Sell forty Purifans with motors to a school and earn \$2,760. If someone in the first level of your downline sells forty Purifans to a school, you still earn \$920 in override commissions. Earn more if you sell motors, light-kits, installation services, filters or cleaning services. This program requires no inventory purchases. Orders are entered on the Purifan website. UPS delivers

the products, and you earn a commission.

The only required investment is the \$50 Starter Literature Kit, but the Company strongly recommends that you purchase one Purifan to try it in your home. You can immediately start selling and earning commissions.

Excellent Training and Support

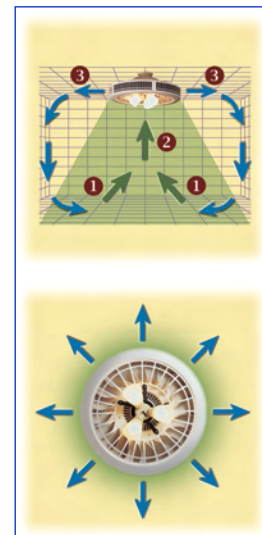

The Company offers excellent training, sales materials and online webinars, to help you succeed. You can sell Purifans to residential customers, commercial customers, government

accounts, schools, daycares, offices, waiting rooms and many other locations that can benefit by providing filtered air to occupants. The Purifan air purifier is ideal for all of these applications. Check out the product performance and compensation details. Sign-up to become a Purifan Independent Business Owner. It could give you the financial freedom of owning your own successful business. Attend a local recruiting meeting or online webinar to find out more.

Where Do Allergens Come From?

All indoor air has microscopic particles floating in the air. They are also in the outdoor air every day and arrive in the room on the skin, clothes, hair and shoes of the people entering the room. They include pollen, mold, dander, dust, exhaust soot and even decaying skin cells. When inhaled, these particles can cause many serious and expensive health problems. To reduce allergy or Asthma symptoms, reduce exposure to the allergy and Asthma triggers by filtering your indoor air. Some schools reported a 70% drop in inhaler use when Purifans were installed.
